

ADD-ON MODULE

Delivered to Telephone, PDA, TV or Browser, iPGS is a “multi-level environment“ which means a potential Guest can explore hotel services, information and amenities while on the move and have access to the complete Guest Interactive components after check in and authentication.

Graphically rich with full customisable design iPGS also has additional revenue for advertising, internal and external dining, local bars and services. iPGS allows the guest access to the hotel services when they want them and where they want them.

iPGS is an Android & Apple hotel application available to Guests via the Android and iTunes Market stores.

Safe with secure Guest authentication for higher levels of functionality.

Provides Guests an intuitive insight into the selected hotel at the touch of a key 24 hours a day.

Has a rich feature set including real-time web feeds to Internet services.

Allows true mobility of the Guests while at the hotel, armed with information & in-room technology control at their fingertips such as hotel and local information, room service, weather, flight information etc.
